

IMPORTANT: PRODUCT INFORMATION NOTE

GEMLAN-T Ethernet Interface
8280-4001
9716-4020

Please note, it has come to our attention that Firmware releases on the above two GEMLAN-T modules of Issue E and earlier, can display a fault.

Systems configured with GEM80 controllers connected over Ethernet to third party PCs, operating continuously for up to 49 days can momentarily lose network data. The system would reset automatically, but would not effect normal operation of the GEM80 controller.

Upgrading GEMLAN-T Firmware to issue F or above resolves the problem.

Our apologies for any inconvenience caused.

If any technical assistance is required, please contact our Product Support Group on tel. no. 01782 781111
